Subject: Friday meeting

Hi Bill:

Here's what I had in mind to discuss at tomorrow's meeting:

1. Discussion of the blood lead data from the State - we'll go through your analysis and conclusions. I've asked Gene Hook and Jane Mitchell to bring any and all information they can about what follow-up occurred at the properties where the levels were high. Specifically what they learned about sources of lead.
2. Review the information we pulled together on the results of the lead bioaccessibility tests we ran during the physico-chemical characterization study and the pilot scale study.
3. Brief the group on the decision to adjust the EPC for arsenic to account for the 20% difference between fine and bulk fraction.
4. If you are ready, I'd like to talk about the final results for both lead and arsenic and the monte carlo and the ISE model. They will be very familiar with the arsenic calculations - they'll just need to know the result of the final adjustment. They have never seen the lead risk assessment results.

See any problems?
